

Ways of Working

Factsheet

Working with you:

A flexible and holistic approach to helping you achieve project success

At Onyx Scientific, we've carefully curated our ways of working to meet the most unique requirements of your drug project.

From having the resource, capabilities, flexibility and quality to meet your needs as our customer, we take a unique and flexible approach to your project from candidate selection through to commercial manufacture.

We set clear expectations from the start and tailor our service to deliver the right support that leads your project to success.

Once you have identified your lead candidate for your small molecule drug substance, we collaborate with you throughout the entire development and production process.

We offer a comprehensive selection of options for scaling up your drug substance, both in non-GMP and GMP forms, providing you with material for toxicology testing, Phase I-III clinical trials, and even low-volume commercial API supply, if required.

The four pillars of our integrated, chemistry-led approach

- 1. Commitment to hitting milestones:** We focus on hitting your key deadlines on time, every time, improving productivity and speed wherever possible.
- 2. Ensuring your project runs smoothly:** We are dedicated to mitigating risk at every stage to ensure that the scope for errors is minimized and prevent project deviations.
- 3. Creating value at every opportunity:** our lean and efficient processes allow us to optimize your project by tailoring each stage to your unique requirements.
- 4. Protecting your project:** We remain committed to future-proofing your project against downstream development and production issues.

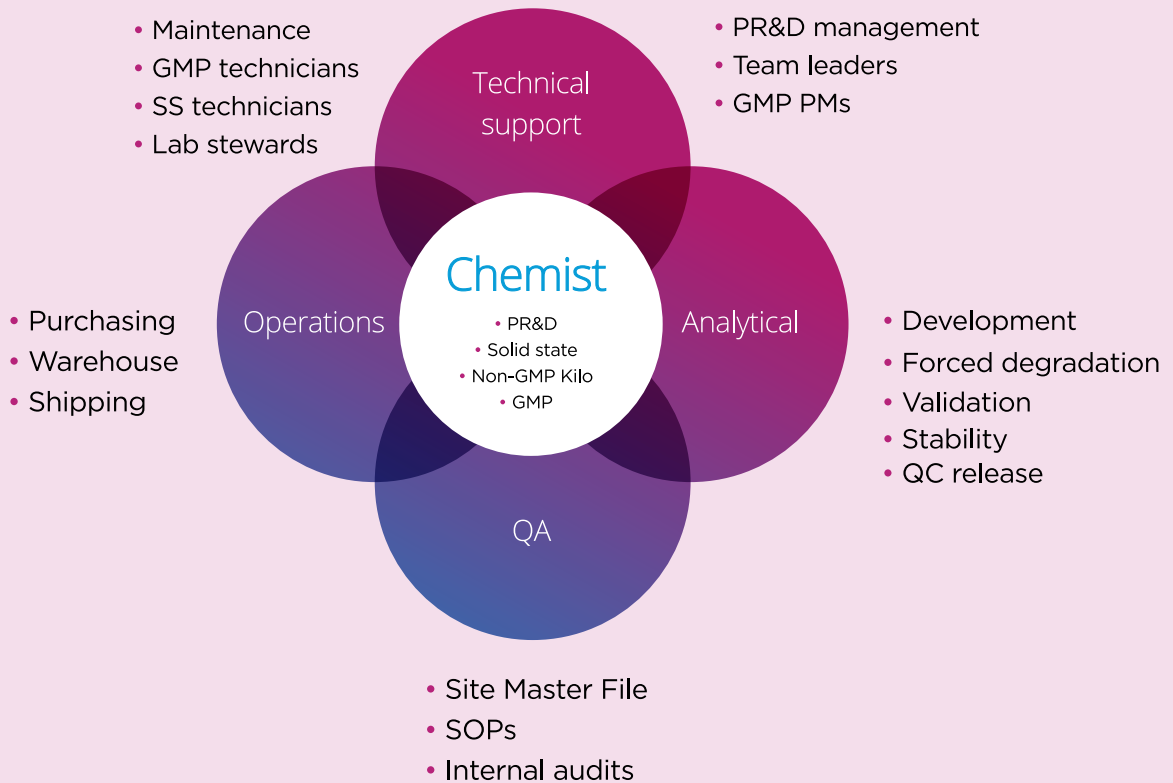

What makes the Onyx way **different?**

At Onyx, we use a project management approach where technical experts lead each project and focus on incremental milestones, instead of one overall project.

We don't believe in siloes, which is why we ensure transparent cooperation across our teams to help us identify and manage risks

and issues from the earliest possible stages, keeping to your project timelines and minimizing delays.

Our teams work collaboratively with you, ensuring that any knowledge gaps are filled throughout the entire process and giving you control over each stage of your project.

Our tailored approach to **your chemistry**

We don't do "one-size-fits-all". We adapt our ways of working to the unique needs of your project to ensure that the best route is chosen across each phase of your study.

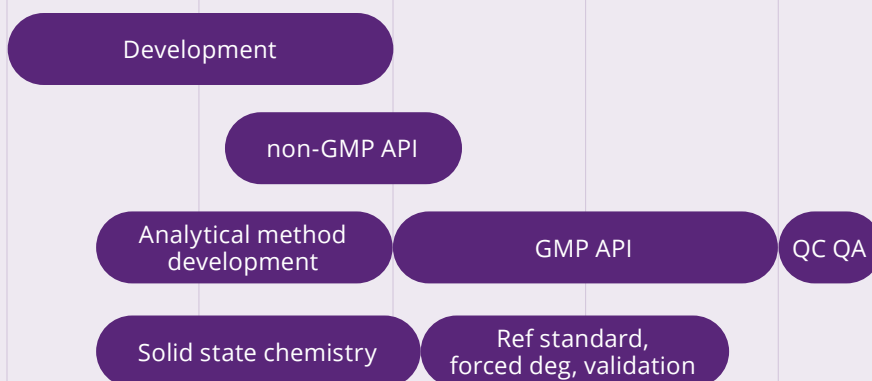

By taking a material-centric approach to solid form selection, we carefully consider the specific characteristics of each of your compounds to create a bespoke process that fits the exact needs of your project and optimizes its journey to market.

For example, during Phase 3 we conduct more extensive investigations of the compound's behavior and form than we might have in Phase 1, since the purity profile may change in later phases, which can impact the behavior of your compound.

Our goal is to extract as much relevant information as possible about your compound in a phase-appropriate manner.

Testimonials

“Onyx Scientific is one of the top development companies within the life sciences industry. They have a clear niche in how they integrate their process development, solid state and analytical services. I find their no nonsense, straight forward approach helpful and efficient and it makes my role as a consultant much easier. Their technical expertise is very strong, and I’d have no hesitation when it comes to recommending them for similar projects.”

David Lathbury, Consultant

I have no hesitation in recommending working with Onyx Scientific. Flexible and knowledgeable, Onyx has the capabilities needed to complete API chemical development and kilogram-scale GMP manufacturing projects to very high standards and in a cost-effective manner. What’s more, the team is made up of high-quality scientists and the direct interaction approach to project management that they take makes it feel as though I have my very own chemistry team there.

**Peter Spargo, Senior Vice President
Chemistry Manufacturing at
Verona Pharma**
